25 Reasons to Join Atlantis

Medical schools want 3 things: healthcare exposure, GPA/MCAT, and AAMC competencies. When you shadow with Atlantis, you get all 3. But there are many more reasons to consider our programs. Read on for more things to love about Atlantis.
allows admissions committees to then build a class with a diverse set
of experiences. Suppose your undergraduate experience and medical
school applications focus on an interest in pediatrics or healthcare
policy. You might have taken classes in college related to these topics
or you might have already participated in extracurriculars surrounding
these themes. With Atlantis, you can not only shadow (and request
certain specialties), you can participate on a project with an institution
such as Children’s National Hospital in D.C., or in similar institutions.
This is done through our Service-Research Projects, which can fit
many themes.

9. Meet passionate pre-health students from
across the country
You’ll have many new friends to hang out with in the evenings
and on free weekends, and Atlantis students often stay in touch
with their fellow participants long after their program ends. This is also
an opportunity to obtain a broader and more geographically diverse pre-
health peer network. As you later go through med/PA applications (and
beyond) everyone can benefit from this.

10. Be part of an incredible alumni network
Atlantis alumni hail from 500+ universities and go on to pursue MD,
DO, PA, and many other health professions. Some go on to attend top
medical schools like Harvard, Stanford, Duke, and beyond.

11. Observe procedures you couldn’t in the U.S.
Shadowing complex procedures in the U.S. is not always possible,
and where it is available, it’s time-consuming to arrange. Atlantis
allows you to observe surgeries and high-level work that most
pre-meds don’t get to see.

12. Shadow for over 200 hours in leading
hospitals throughout Europe
Students shadow for 1–10 weeks in leading European hospitals,
with a minimum of 20 hours per week. With 200+ shadowing hours —
especially high-quality shadowing in other developed countries —
you’ll have no shortage of stories.

13. Join a program attended by 1 out of
10 pre-health advisors
Each year, pre-health advisors and university partners visit
our sites and come away with enthusiasm for how much the
program helps students preparing for the medical field.

1. Travel the world now while you still have time
College is the perfect time to explore new cultures before other
responsibilities kick in. Shadowing over break means you’re utilizing
your breaks to their utmost potential.

2. Fit multiple countries into a few weeks
From Bologna to Budapest, Barcelona to Belgrade, you can shadow
in several countries back-to-back and then use your free weekends
to explore practically anywhere in Europe.

3. Study abroad in a way that’s relevant to your
pre-health path
Most study abroad programs are only somewhat valuable for your
pre-health path, in that they develop your cultural understanding
but don’t give you an in-depth understanding of healthcare. Atlantis
does both at once.

4. Be advised by someone experienced with med
school admissions
All first-time Atlantis students are invited to attend a set of alumni-only
Q&A sessions run by someone experienced with admissions to U.S.
medical schools. As a complement to that, students can also sign up for
mentoring with an incoming top ten medical school student.

5. Obtain a Harvard Medical School Pre-Health credential
Some of our programs include enrollment in a self-paced, HMX online
course, with the potential to earn a certificate from Harvard Medical
School upon completion.

6. Leverage your experience for uniqueness projects
We have seen alumni do many unique projects after shadowing
abroad with us, projects that set them apart in medical school
application pools as some of the very few people bridging
international healthcare systems.

7. Do a Service-Research Project
With Atlantis Service-Research Projects, you get to add elements to your
med/PA applications and interviews, namely, a service opportunity, a
unique research experience, and an elite brand (at a level where 90%+
of med/PA applicants are not exposed to).

8. Develop a theme/edge for your med/PA applications
Successful medical school applications often have a theme, which

14. Free up your time to focus on grades

360 Shadowing covers your bases in terms of extracurricular activities, most of which are uninteresting to interviewers anyway, whereas Atlantis is often a key topic of med/PA school interviews.

15. Shadow up to 10 specialties in one summer

Programs range from 1—10 weeks long, and students generally rotate between departments every week. Examples include General Surgery, Orthopedics, Anesthesiology, Pediatrics, OB/GYN, and Gastroenterology. Although not every specialty that you request can always be granted, Atlantis participants generally receive many (and often all) of their requests.

16. Bring unique stories to apps/interviews

Our alumni in med school have told us things like, “This was always a topic of conversation in interviews.”
(Thomas C., UVA School of Medicine, ’22)

17. Observe doctors 1:1 or 2:1

Atlantis programs are almost always small. We take great care to arrange for students to (almost always) shadow in pairs or individually, allowing you the greatest opportunity to grow familiar with the physicians and to (when possible and not disruptive) ask questions.

18. Confirm if medicine is really for you

Atlantis helps you envision your own future and determine where your passion lies – whether that is in medicine or not. The time will be well spent as you discern your vocation and develop confidence in your career path.

19. Get firsthand knowledge of global healthcare

Atlantis gives you firsthand knowledge of global healthcare to bring to interviews. If you read medical school blogs, they often talk about the big question of our society’s healthcare costs problem, and these and other healthcare blogs often talk about the pros and cons of universal healthcare systems such as those in European countries, that Atlantis participants visit. Atlantis alumni who are today in medical school (and most medical schools have Atlantis alumni as we speak) are some of the very few people in the student body who have had direct experience with universal healthcare (and its many pros and cons). This is an asset you bring in to your Med/PA applications (likely), and later to the healthcare community and society (certainly).

20. Progress on AAMC competencies like 3% of Atlantis alumni

Atlantis helps you develop hard and soft competencies more effectively than your average clinical experience. You’ll be exposed to more medical situations in more cultural contexts, shadowing doctors particularly motivated by a spirit of service.

21. Meet more doctors with a service-first attitude towards their careers

There are many pros and cons of this, but one thing is for sure: the profit motive plays a lesser role in European healthcare, and generally in universal healthcare systems. Atlantis is an opportunity to understand these differences. Alumni often share what a privilege it was to witness and be inspired by service-driven healthcare professionals.

22. Ask for recommendation letters from physicians who care

With a bit of intentionality, you can certainly ask physicians you shadow for rec letters – this opportunity arises all the time on Atlantis, and we think you’ll find that physicians are very happy to help. They want you to succeed! However, keep in mind the advice you have already received on letters of recommendation: they are only worthwhile when you have really met the person in question at a significant level.

23. Show that you have both “can do” and “will do”

Med/PA schools look for ability and passion. With physician burnout on the rise, it’s not enough to demonstrate your skills with a high GPA and MCAT. You need experiences that show a tried and true love for medicine.

24. Step outside your comfort zone

There’s nothing like getting on a plane and observing busy doctors in a foreign country while overcoming the unpredictabilities of travel. You’ll have ample opportunity to show the AAMC competency of resilience and adaptability. Staying at home in a place you already know can have many advantages (and can be the right thing to do), but generally does not cultivate resilience and adaptability in the same way.

25. Advance your career in healthcare for a small fraction of your overall tuition

Atlantis programs are small and individualized. We take great care to arrange for students to shadow in pairs or individually, allowing you the greatest opportunity to grow familiar with the physicians and to ask questions.
